GENERAL

A general differentiation of the series is generally made between a rolling or a sliding belt support. Possible combinations of sliding and roller conveyors are often used in sorting conveyors. For a specially shaped run the conveyors can be equipped with either **concave** or a **convex bend**.

The modular sheet metal construction offers the possibility of upgrading the conveyor without major alterations whenever necessary and to complete it with additional equipment.

Additional equipment such as speed monitors, skew controls, trigger lines for an emergency stop, covers in robust sheet metal construction or light-weight, easily mountable or removable, PVC-tarpaulin, side panels in different heights with rubber or PVC sealing strips, belts in oil and grease resistant quality as required, heat resistant, multilayer, chevron belts or equipped with carrier, scraper devices for differ applications perfect the product range.

DESCRIPTION

roller conveyor, standard type, troughed roller supporting station
roller conveyor, standard type, straight roller supporting station
roller conveyor, heavy-duty type, troughed roller supporting station
roller conveyor, hopper conveyor, troughed roller supporting station
sliding belt conveyor, standard type, troughed slide bed
sliding belt conveyor, standard type, straight slide bed
sliding belt conveyor, light-duty type, troughed slide bed
sliding belt conveyor, light-duty type, straight slide bed
customized design conveyors, multi type, slide bed in combination with roller supporting station
